

Assignment 4

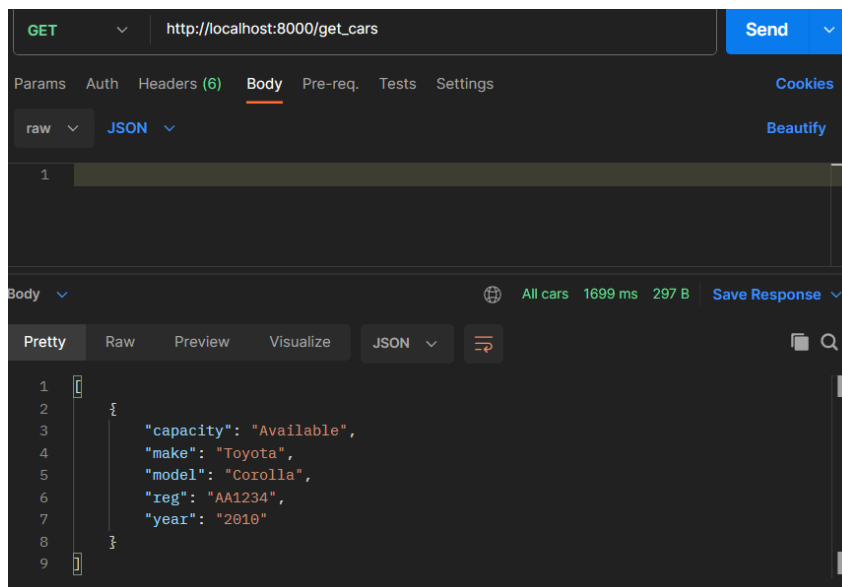

Repository: <https://github.com/LastColin/assignment-4>

- save/add new cars, customers and employees

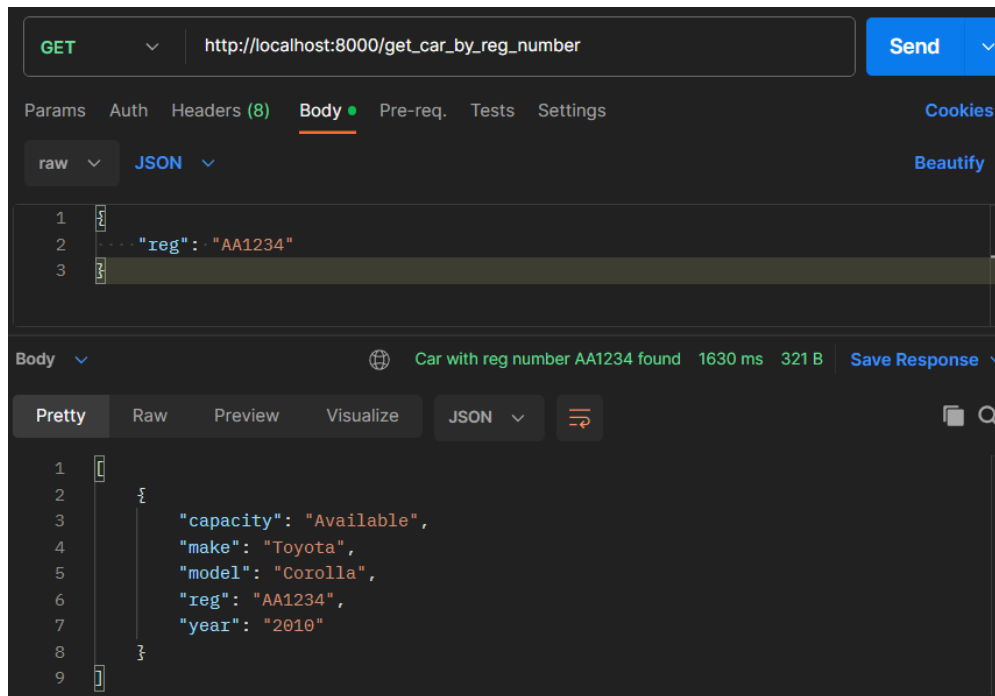

Works the same way with `save_employee` and `save_customer` but with different variables

- Get car, customer and employee
 - Get all

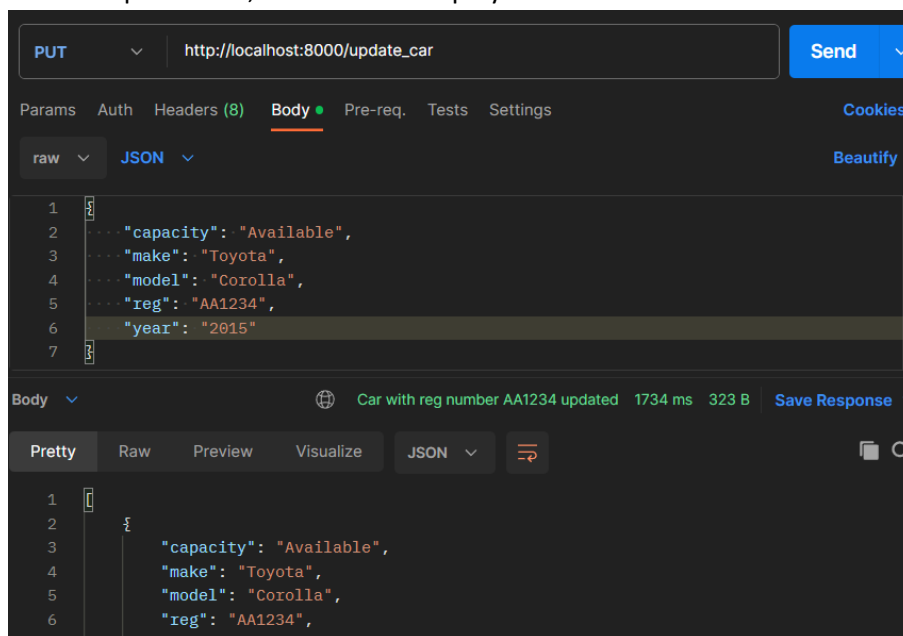

Works the same for `get_employees` and `get_customers`. Returns all cars, employees or customers

- Get single

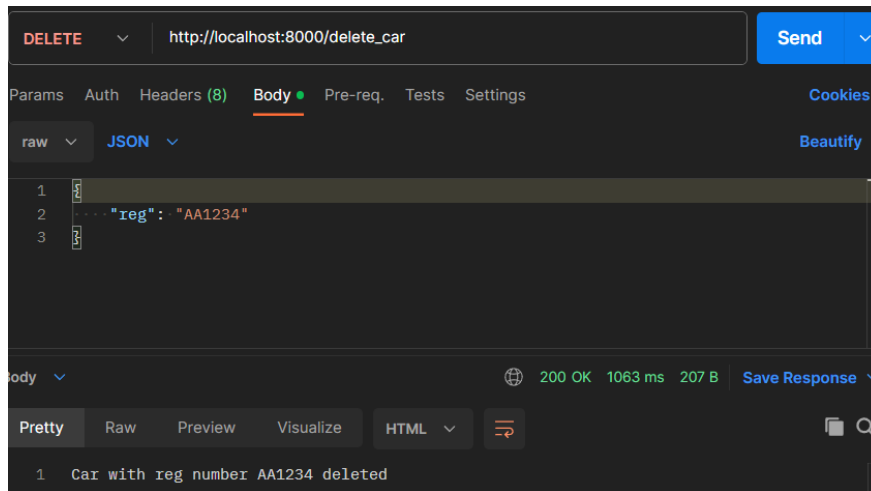

Works the same with `get_customer_by_id` and `get_employee_by_id` but with “id” instead of “reg”

- Update cars, customer or employee

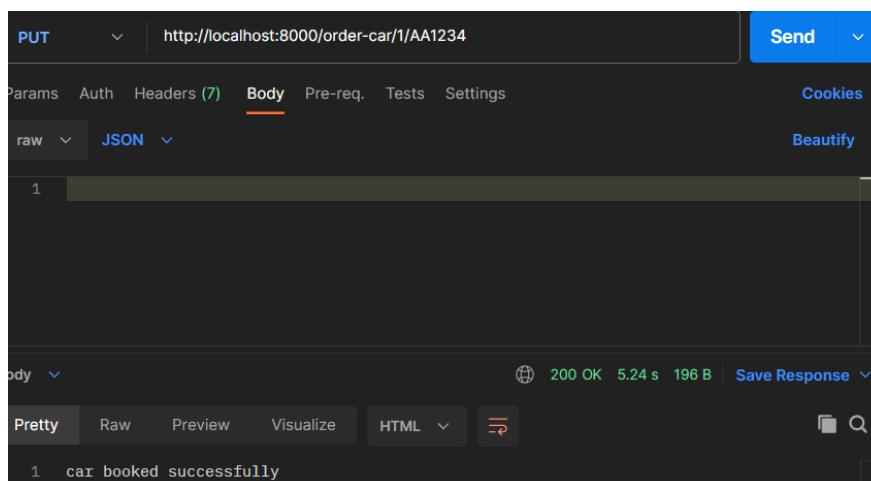

Works the same for `update_employee` and `update_customer`

- Delete car, customer or employee using reg number or id

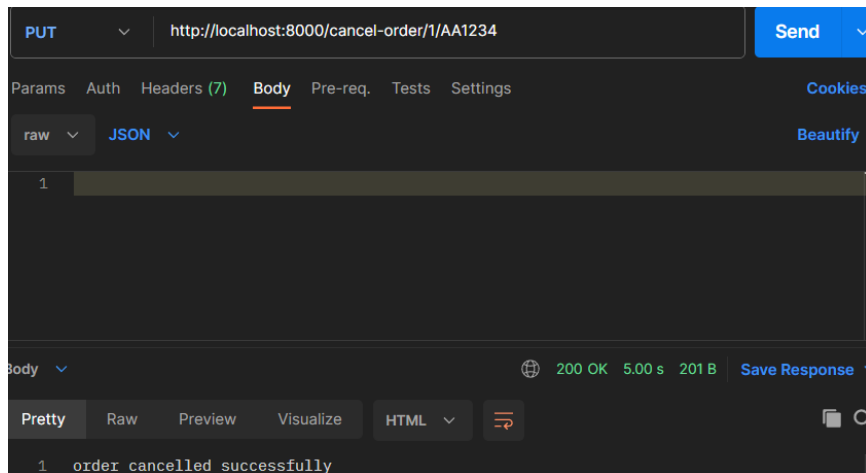

Works the same for delete_customer and delete_employee but with “id” instead of “reg”

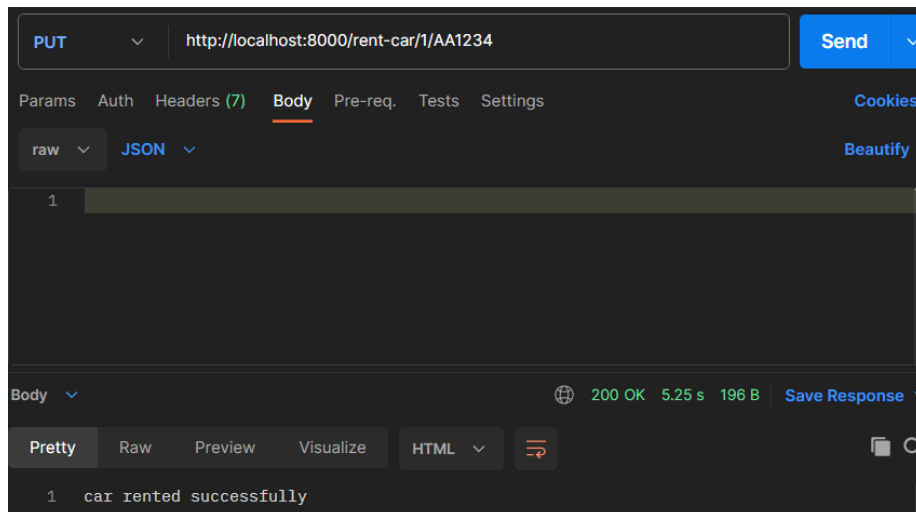

- Order-car, takes customerId and carId(reg number) in url

- Cancel-order, takes customerId and carId in url, checks if theres an order for car by the customer and cancels if true

- Rent-car, sets car to “rented”

- Return-car, sets car to “available” and “ordered_car” to ‘None’ for customer
